## Chapter 9: The Human Population

## Section 2, Changing Population Trends Day Two

## **Changing Population Trends**

•	is the basic facilities of a country or region, such a	s roads, bridges,
sewers, power plants, subways, schools	s, and hospitals.	
olems of Rapid Growth		
<ul> <li>A rapidly growing population can use re</li> </ul>	sources faster than the environment can renew them, unless re	esources come from
elsewhere.		
Symptoms of overwhelming populations	s include	
nortage of Fuelwood		·
<ul> <li>In many of the poorest countries,</li> </ul>	is the main fuel source.	
<ul> <li>When populations are stable, people us</li> </ul>	se fallen tree limbs for fuel. When populations grow rapidly,	
doe	es not accumulate fast enough to provide enough fuel.	
fe Water		
In places that lack infrastructure, the loc	cal water supply may be used not only for drinking and washing	but also for
As a regult, the water cumply becomes

Managi	ng Development and Population Growth				
•	Many countries favor stabilizing population growth through investments in				
	through improvements in women's status.				
Growth	Is Slowing				
•	Fertility rates have	_ in both more-developed and less-	developed regions.		
•	If current trends continue, most countries will have	ries will have fertility rates by 2050. If so		50. If so,	
	world population growth would eventually stop.				
Project	ions to 2050				
•	Looking at the graph below, most demographers predict the medium growth rate, and a world population				
	of	in 2050.
